

# CUED AV Support

## Content Creation Loan Kit #1

### Quick start Guide

This is a brief guide on how to setup the 3 devices in this kit to enable high quality capture of audio & video for presentations or interviews.

There are two different 'U' shaped mounts for the Logitech Streamcam webcam.

The first is the monitor mount – this clips onto the top of a monitor, keeping the webcam at a reasonable height to where you are sat or stood, depending on your physical setup.

The second mount has a screw thread underneath – this clip can be mounted on the Hama desk stand for free-standing positioning, on the thread mount within the LED ring light, or on a standard camera tripod (not supplied).

This clip enables a lot of options for where to position the webcam for optimum angle, ensuring the camera picks up what you require.

### Example setup

Always use what lighting you have available, such as daylight or room lighting. The LED ring light can then be used to fill in where there are shadows, giving even lighting on the subject. Alternatively, in dark environments it can be used as the main light, which is where having the webcam mounted within the ring (as in picture above) is preferred.

The microphone should be placed near the camera, pointing towards the subject.
